
Intermountain Power Plant

The City executed a Power Sales Agreement with Intermountain Power Agency (IPPA) in the early 1980s for 13.225% of the energy output from 1,800 MW IPP facility located in central Utah. Thirty-six utilities serving California and Utah receive capacity and energy from this project. Energy is delivered to Anaheim and other California participants through the Southern Transmission System to the Victorville/Lugo interconnection with the California Independent System Operator.

The 40-year contract expires on June 15, 2027.
